

Credo™. The Solution Whose Time has Come.

In the highly demanding world of temperature-controlled transport, organizations can find themselves faced with extreme challenges. Minnesota Thermal Science began as a company offering solutions to those challenges. The U.S. Army desperately needed a primary container to transport critical blood supplies to the frontlines. The Original Golden Hour® Container was developed by MTS to provide unparalleled thermal control in a highly portable carrier for the extended time periods required by mobile medical teams. The result was a revolution in the way combat medical supplies are transported, recognized by the Army's Greatest Inventions Award.

Today, MTS continues to apply its industry-leading technology to answer the needs of organizations facing unique challenges across the globe. One such company, LifeCell Corporation, needed a system that would succeed where their conventional ice-based methods could not. Five months after contacting MTS, LifeCell was using custom-designed Credo™ containers to achieve a higher level of thermal control and eliminate the mess and restrictions of ice. "LifeCell has received over 600 shipments with the new system, and we are pleased to report that no donor tissue has arrived outside of temperature requirements."

At MTS, we thrive on tackling previously unbeatable thermal-control challenges. Whatever the temperature-sensitive material or harsh thermal environment, we'll create the ideal solution for your unique needs.

Series S—Customized Solution

Product ID 1748	
Payload Capacity (liters/cubic inches)	17.5 / 1067.3
Payload Area Dimensions (L x W x H)	12.25" x 10.25" x 8.5"
Exterior Dimensions (L x W x H)	20" x 16" x 16.75"
Tare Weight	29 Lbs.
Thermal Performance in ISTA Summer Profile	48 Hours
Outer Container	Reusable Container
Insulator	Cellular Insulation
